

Mound Road Access Management Components

This project provides opportunities to implement access management as part of the project (instead of potential out-of-pocket costs to a property owner if a site were to be redeveloped in the future).

Driveway consolidation

There may be opportunities for businesses with multiple driveways to consolidate access. Shared access with adjacent properties can be considered too.

Managing median crossovers

Signalization or changes to crossovers in conflict areas.

Redesigning driveways

Generally driveways will be rebuilt to current standards for widths and radii. Restricting certain movements onto and off of Mound Road may be considered to meet standards and improve safety.

Targets for a Better Mound Road

GOALS

Improved access management along the Mound Road corridor could achieve the following goals:

Decrease the frequency and severity of crashes

Smooth and efficient traffic flow

Improve safety for those walking

Provide reasonable access to businesses and support economic development

ACTIONS TO REACH THESE GOALS:

- Adequate space for vehicles to weave between driveways and median crossovers
- Reduce the number of driveways near signalized intersections
- Good spacing between crossovers and traffic signals to facilitate traffic flow while still providing reasonable access to properties
- Efficient crossover spacing
- Good spacing between access points
- Driveways designed to minimize disruption between vehicles turning and those traveling along Mound Road (vehicles, pedestrians, bicyclists)
